The Silver Foxes, a software development team affiliated with the Spring 2021 Software Engineering course at the University of Mount Union, announce the presentation of the

Silver Surfer Project!

The Silver Surfer Project is a web application made for professors in the UMU CS department to use in making class websites. The application provides a text area where professors enter their content, which then provides a website for them to use, complete with HTML and CSS styling. This will allow for sites made by professors within the department to be consistent in layout and therefore easier for students to navigate. By creating this application, we hope to provide professors with a simple and easy method of creating student-friendly websites that will streamline communication between professors and students.

We will be presenting the Silver Surfer Project virtually on April 27th, 2021 at 3 PM. If you would like to attend the presentation of our project, please contact haissfm2021@mountunion.edu !
